FLOW THROUGH DRUM

STAINLESS STEEL

- **HYDRAUFLAKING** is the profitable way to reduce frozen or hard blocks of meat, poultry, fish, cheese, chocolate, etc. prior to further processing.
- THE STAINLESS STEEL FLOW THROUGH DRUM IS AVAILABLE FOR CURRENT USERS OF THE MODELS 2501 & 2500 HYDRAUFLAKERS.
- “Cycle Slice” blades eliminate shredding or clawing. As a result, texture, temperature, and color are maintained for better yield and improved quality control.
- The **Model 2501 GenMac Hydraflaker** feeds blocks automatically with an adjustable pneumatic ram (80 PSI pressure). The ram can be started and stopped as desired for controlled batching without turning the power off.
- The cutting drum is enclosed with electrical safety guards. When opened, the guards automatically turn the power off while activating a drum brake.
- **Model 2501 GenMac Hydraflaker** frame construction is T-304 seamless welded stainless steel.
- The Model 2501 GenMac Hydraflaker employs 10 Cycle Slice blades mounted on a 12.5” (31.75 cm) STAINLESS STEEL FLOW THROUGH DRUM, (540 RPM).
